

TIM CONSULT going global

March 2015

TIM CONSULT GmbH establishes affiliate in White Plains/NY

Not only do we celebrate 20 years consulting services this year. The foundation of our first US affiliate in White Plains/NY beginning of March 2015 is an additional reason for celebration. With immediate effect our US affiliate enables us to support all clients with the optimum design of their global value networks.

Over the years TIM CONSULT's business in the United States has been constantly growing. Since 2003 we work for European customers in the US and support them with benchmarks, freight tenders and network optimisation. Since 2005 US companies make use of TIM CONSULT's expertise on European land transport markets, on worldwide transport markets (ocean, air, express) and more and more in the NAFTA region.

This success is owed to our efficient mix of sound methodological proficiency and creativity as well as extensive NAFTA market know-how.

One important step in this direction was the launch of the Market Intelligence Initiative North America Road and Rail, end of 2011, which focusses on benchmarks and best practice analyses for FTL, LTL and intermodal transports as well as the optimisation of freight procurement.

Being close to the market we have been able to built up an extensive and excellent knowledge about the US American supply chains, network structures and market characteristics during the last years. This is for the benefit of European clients based in the USA. It is our clearly defined goal to become closer to our regional clients with an office and a local team on site.

„Facing our successful US activities it was for us a natural step to found an affiliate in White Plains /NY. By doing this we demonstrate the value we ascribe to our US clients and we follow our European clients to the NAFTA market being of unchanged importance to them”, says Björn Klippel, Managing Director of TIM CONSULT, “being closer to our American clients we strengthen their trust in us and in our expertise on the American logistics market.”
